

GAMUT ASSURE PARTNER NETWORK

Build a governed AI practice that compounds.

A selective partner programme for credible AI governance, security, risk, privacy, audit, assurance and implementation professionals.

30%	Your practice
first-year subscription commission	Your offers, pricing, client relationships and delivery model

Add a production-ready assurance operating layer to the AI work your clients already trust you to deliver.

gamutassure.com/partners/

THE OPPORTUNITY

Two revenue streams. One governed delivery platform.

Gamut helps partners turn one-off AI governance and assurance engagements into repeatable, evidence-led programmes while retaining the trusted-adviser relationship.

Subscription commission Receive 30% of the first-year Gamut subscription fee for each genuine referred client subscription from Standard through Enterprise.	Professional services revenue Keep the revenue from strategy, implementation, remediation, training, board support and managed-assurance services you deliver.
Repeatable delivery Use a consistent operating environment for system records, intake, routing, assessment, evidence, findings, workpapers and reporting.	Ongoing client relationship Continue authorised delivery through controlled client workspace assignments without receiving operational administrator privileges.

Commission examples

Plan	Illustrative annual price	First-year partner commission
Standard	\$4,990	\$1,497
Advanced	\$14,990	\$4,497
Enterprise	Tailored	30% of agreed first-year subscription value

Commercial independence Partners define their own consulting offers, pricing, client relationships and delivery model. Enterprise commission depends on the agreed first-year subscription value. No earnings are guaranteed.

VERIFIED PARTNER ENVIRONMENT

A dedicated tenant for learning, practice and bounded internal use.

Partner access is a controlled programme entitlement rather than an ordinary customer subscription. Benefits are enabled only for approved partner organisations and eligible members.

Partner Academy Role-aware learning for Gamut operation, evidence-led assessment, partner delivery and secure agentic governance.	Synthetic sandbox An editable demonstration environment for training, walkthroughs and safe workflow practice using seeded synthetic data.
---	--

VERIFIED PARTNER ENVIRONMENT - CONTINUED

Bounded internal use Where enabled, partners can govern their own AI systems using assessment, evidence, findings, workpapers, reports and Agentic CISO governance.	Assessment coverage Enabled partner environments can work with GTSAP, EU AI Act, NIST AI RMF, NAGF, MAESTRO, ACRS and ATF. ISO access remains subject to separate licence confirmation.
---	---

Activation conditions

- The partner organisation is active and its agreement is signed.
- The relevant Academy, sandbox or internal-use benefit has been enabled for the organisation.
- The member account is active and holds current practitioner or lead accreditation where required.
- Multi-factor authentication is enrolled before tenant data can be accessed.
- Member status, accreditation and programme standing remain subject to expiry, suspension and renewal.

Production runtime is not included The partner tenant does not provide production Gateway or Claw operation, runtime credentials, tenant administration, production policy approval, risk acceptance or production execution authority.

CLIENT-AUTHORISED DELIVERY

The client keeps control of its tenant, data and partner access.

Introducing a client does not create standing access. Formal delivery occurs only inside the client's own Gamut tenant through an explicit workspace assignment.

Control	How it works	Why it matters
Client invitation	The client selects the accredited partner member, workspace, role and expiry.	The client remains the authority for external access.
Exact workspace	The assignment applies to one named workspace, not the whole tenant.	Unrelated client systems and workspaces remain outside scope.
Delivery role	The member receives Partner Assessor or, for a lead-accredited member, Partner Lead.	Delivery permissions stay distinct from administration and approval authority.
Time limit	The assignment expires on a client-selected date no more than 366 days ahead.	Access cannot silently become indefinite.
Immediate revocation	The client can revoke an active assignment and remove workspace membership.	Access can be terminated without waiting for the expiry date.
Continuous validation	Gamut rechecks assignment, partner standing, accreditation, MFA and client entitlement.	A previously valid identity is not trusted indefinitely.

Client subscription remains the outer boundary A partner role cannot unlock a product capability the client has not licensed. Frameworks, exports, AI analysis and runtime functions remain subject to the client's plan and any additional licensing conditions.

Practice in the partner tenant. Deliver formally in the client's tenant.

Gamut separates training and internal partner use from client-licensed assessment delivery so that convenience cannot override tenancy, entitlement or assurance boundaries.

Own-organisation attestation Partner-created internal workspaces record whether the use is for the partner's own organisation and retain review signals where identity or purpose is unclear.	Marked partner outputs Sandbox and internal-use exports carry a visible notice identifying them as internal training material, not Gamut-licensed client assessment deliverables.
Separate client tenancy Every customer has its own tenant. Client records are not managed from the partner tenant and partner access is not inferred from a referral.	Server-authoritative checks Entitlement, role, assignment, accreditation and MFA decisions are enforced by the server. Interface visibility is not treated as authority.

Partner can	Partner cannot
Complete Academy learning; practise with synthetic data; govern enabled internal systems; create assessment records; collect evidence; record findings; prepare workpapers and reports; perform authorised client assessment work in an assigned workspace.	Administer the client tenant; access unrelated workspaces; manage runtime credentials; operate production Gateway or Claw from the partner tenant; accept client risk; approve production policies; self-approve; turn a sandbox export into a client-licensed deliverable.

WHAT PARTNERS CAN DELIVER

A repeatable operating layer for the full assurance lifecycle.

Gamut supports the records, decisions and evidence around client AI programmes while partners retain responsibility for the professional services they are qualified to deliver.

Gamut provides	Partners provide
Secure client tenancy; system and use-case records; risk classification; framework routing; control assessment; evidence and findings workflows; workpapers and reports; Agentic CISO governance; appropriately entitled Gateway enforcement and runtime traceability; fixed-scope technical onboarding.	AI strategy; governance operating-model design; discovery and readiness; implementation support; policy and control design; remediation and change support; board and executive advice; managed assurance; client training; legal or regulatory advice where professionally qualified.

Partner enablement supports

- Positioning Gamut within AI transformation, governance, risk, security, compliance and assurance engagements.
- Running discovery, inventory, classification, assessment and evidence-led assurance workflows.
- Using findings, remediation, workpapers and reporting to support defensible client outcomes.
- Building fixed-scope assessments, implementation offers and recurring managed-assurance services.
- Supporting autonomous-agent and runtime-governance engagements without overstating partner runtime authority.

From application to controlled client delivery.

The programme combines commercial enablement with explicit identity, accreditation, tenancy and delivery controls.

01 Apply Submit the partner application and relevant professional background.	02 Review Gamut reviews experience, service capability, client profile and partnership goals.
03 Contract and verify Complete partner contracting and organisation verification.	04 Activate securely Activate the dedicated partner tenant and enrol MFA.
05 Learn and accredit Complete Partner Academy enablement and obtain current member accreditation.	06 Practise Use synthetic demo data and enabled internal-use capabilities within the partner tenant.
07 Introduce a client Support the commercial conversation while the client retains its own tenant and subscription decision.	08 Onboard Gamut completes the agreed technical onboarding for the client environment.
09 Receive assignment The client assigns the accredited member to the exact workspace, role and period required.	10 Deliver and grow Continue authorised advisory and assurance work and receive the agreed first-year commission.

Ready to build your governed AI practice?

Review the full partner proposition and submit an application at gamutassure.com/partners/. Gamut will review the completed form before arranging the appropriate partner demonstration or screen share.
